Daniel Felipe Cossio Marulanda

Colombia (Open to International Relocation)
danielcossio195@gmail.com • LinkedIn, GitHub

Systems Engineer and Java Software Architect with over 4 years of professional experience designing and delivering scalable enterprise applications, microservices, and process automations. Currently serving as a Java Software Architect at Ceiba Software, defining systems with Java (8–21), Spring Boot, Hexagonal Architecture, RabbitMQ, and Angular, while managing CI/CD and Kubernetes deployments (Jenkins, Rancher, Keel, SonarQube) and mentoring engineering teams. Proven track record of measurable business impact, including training 5 developers from scratch, reviewing code for 10+ peers, and delivering 20+ RPA automations that reduced manual operations by 95%. Open to international relocation.

Core Competencies

- **Backend & Software Architecture**: Java (8–21), Spring Boot, JPA/Hibernate, Hexagonal Architecture (Ports & Adapters), Microservices, MVC, RESTful APIs, RabbitMQ, Python.
- **Databases & Persistence**: PostgreSQL, MySQL, Oracle Database, Relational Data Modeling & SQL Optimization.
- **CI/CD, Containers & Code Quality**: Kubernetes (K8s), Rancher, Keel, Jenkins (CI/CD), SonarQube, JUnit, Mockito, Gradle, Maven, Git, Postman, Insomnia.
- **Frontend & Full-Stack Development**: Angular, TypeScript/JavaScript, JSF, Responsive Enterprise Web Applications.
- **Agentic Software Engineering & Automation**: Claude Code (Agentic Software Engineering, Context Engineering, Spec-Driven Development, MCP), UiPath, Microsoft Power Automate, Power Platform, AppSheet.
- **Technical Leadership & Agile**: Architectural Governance, Peer Code Reviews (10+ engineers), Developer Onboarding & Mentoring (5 developers trained from scratch), Agile/Scrum.

Professional Experience

- **Ceiba Software** — **Colombia**
  Java Software Architect — *Dec 2023 - Present*
  - Lead the end-to-end architectural design and full-stack development of scalable enterprise web applications and distributed microservices using Java (8–21), Spring Boot, JPA/Hibernate, and Angular.
  - Define and enforce modular software architectures applying Hexagonal Architecture (Ports & Adapters), Microservices, and MVC patterns, ensuring clean separation of domain logic and long-term maintainability.
  - Architect asynchronous event-driven workflows using RabbitMQ and optimize relational data persistence across PostgreSQL, MySQL, and Oracle databases.
  - Manage CI/CD pipelines and container orchestration with Jenkins, Kubernetes, Rancher, and Keel, enforcing automated unit/integration test suites and static code quality gates via JUnit, Mockito, SonarQube, Gradle, and Maven.
  - Onboarded and trained 5 junior developers from scratch and conducted structured peer code reviews for 10+ engineers across project teams to uphold architectural and clean-code standards.
  - Design and validate RESTful API contracts and cross-service integrations using Postman and Insomnia, collaborating closely with product owners and multidisciplinary Agile/Scrum teams.
  - Architect and apply Agentic Software Engineering practices using Claude Code—implementing Context Engineering, Spec-Driven Development (SDD), and automated multi-agent code reviews with human-in-the-loop oversight to ensure architectural integrity and testability.

- **Ceiba Software** **Colombia**
  RPA Developer Architect *Jan 2022 - Nov 2023*
  - Analyzed complex enterprise business workflows alongside multidisciplinary stakeholders to identify high-ROI automation opportunities and design resilient technical architectures.
  - Designed, built, and deployed approximately 20 end-to-end production automations for an enterprise client using Microsoft Power Automate and UiPath, reducing manual operational workload by 95%.
  - Developed custom low-code enterprise applications using Microsoft Power Platform and AppSheet to digitize and streamline cross-departmental operations.
  - Engineered reliable integrations between automated RPA bots, REST APIs, and legacy enterprise systems to ensure zero-downtime business continuity.
- **Ceiba Software** **Colombia**
  Java Developer Intern *Jul 2021 - Jan 2022*
  - Contributed to the technical design and implementation of modular web architectures using Java, Spring Boot, and Angular.
  - Developed core backend and frontend features for enterprise inventory management systems and external REST API integrations validated with Postman and Insomnia.

Key Architectural & Engineering Highlights

- **Event-Driven Hexagonal Microservices & Jenkins/K8s CI/CD**: Standardized enterprise Java (8–21) & Spring Boot backend architectures applying Hexagonal Architecture (Ports & Adapters), RabbitMQ messaging, SonarQube/JUnit/Mockito quality gates, and automated Kubernetes deployments via Jenkins, Rancher, and Keel.
- **Agentic Engineering Governance (Claude Code & MCP)**: Applied Spec-Driven Development (SDD) and Context Engineering workflows with automated multi-agent quality checks and human oversight, accelerating delivery while enforcing strict architectural standards.
- **Enterprise Process Automation Suite (Ceiba Software)**: Architected and delivered a portfolio of ~20 production bots and low-code workflows (UiPath, Power Automate, Power Platform) that eliminated 95% of manual processing time for a major client.
- **Soft Skills Learning Support Platform (Undergraduate Thesis)**: Designed and built a full-stack web application supporting interactive soft-skills training, assessment workflows, and progress tracking at Universidad del Valle.

Education

- **Universidad del Valle** **Colombia**
  B.Sc. in Systems Engineering (Ingeniería de Sistemas) *2017 - 2025*
  Thesis: "Development of a support tool for learning soft skills." Coursework in software architecture, distributed systems, relational databases, and full-stack web engineering.

Languages

- Spanish (Native), English (B2 – Upper Intermediate, professional working proficiency in international environments).
